Submitted (FEB-1994) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: INHIBIN IS A GONDAL GLYCOPEPTIDE THAT INHIBITS THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND.
-!- SUBUNIT: DIMERIC, LINKED BY ONE OR MORE DISULFIDE BONDS.
INHIBIN A IS A DIMER OF ALPHA AND BETA-A.
INHIBIN B IS A DIMER OF ALPHA AND BETA-B.
-!- SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0

-1- FUNCTION: INHIBIN IS A GONADAL GLYCOPEPTIDE THAT INHIBITS THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND.

-1- SUBUNIT: DIMMRIC, LINKED BY ONE OR MORE DISULFIDE BONDS.

INHIBIN A IS A DIMER OF ALPHA AND BETA-A.

INHIBIN B IS A DIMER OF ALPHA AND BETA-B.

-1- SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   INTERCHAIN (BY SIMILARITY).

-:- FUNCTION: INHIBIN IS A GONDAL GLYCOPEPTIDE THAT INHIBITS THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND. ON THE CT:ER HAND ACTIVIN ACTIVATES THE SECRETION OF FOLLITROPIN.

-:- SUBGNIT: DIMERIC, LINKED BY ONE OR MORE DISULFIDE BONDS.
INHIBIN A IS A DIMER OF ALPHA AND BETA-A.

-:- INHIBIN B IS A DIMER OF ALPHA AND BETA-B.

-:- TISSUE SPECIFICITY: ALPHA- AND BETA-B.

-:- PREDOMINANT FORMS FOUND IN RAT TESTIS.

-:- SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE=90190649; PubMed=2628729;
Feng Z.-M., Li Y.-P., Chen C.-L.C.;
"Analysis of the 5'-flanking regions of rat inhibin alpha- and
beta-B-subunit genes suggests two different regulatory mechanicams.";
Mol. Endocrinol. 3:1914-1925(1989).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "Complementary deoxyribonucleic acid (CDNA) cloning and DNA requence

-i- FUNCTION: INHIBIN IS A GONADAL GLYCOPEPTIDE THAT INHIBITS THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND. ON THE OTHER HAND ACTIVIN ACTIVATES THE SECRETION OF FOLLITROPIN.

-i- SUBUNIT: DIMERIC, LINKED BY ONE OR MORE DISULFIDE BONDS.
INHIBIN A IS A DIMER OF ALPHA AND BETA-A.
INHIBIN B IS A DIMER OF ALPHA AND BETA-B.

The peptides were tested in a competitive binding assay and a Phosphatidyl Inosited (PI)-turnover assay in mouse panereas. None of the peptides demonstrated agonist activity but all inhibited PI-turnover (c.f. stimulation produced by 100nM GRP). Analogues of bombesin are potentially useful for growth therapy and the treatment of digestive disorders, e.g. for stimulating digestion, stimulating growth of tissue in the lung, pancreas and intestine, stimulating NK cell activity against tumour cells and stimulating growth of tumours increase susceptibility to chemotherapeutic agents.

                                                                                                                                        The present sequence represents a bombesin/gastrin releasing peptide type inhibitor peptide. The peptide may be used as an antimitotic and antisecretory peptide. It can control growth of small cell lung and prostatic carcinomas, and it can also inhibit gastric secretions which are causative and symptomatic of peptic ulcers. Administration may be oral but is preferably subcutaneous, intravenous, intramuscular or intraperitoneal, by depot injection, by implant preparation or by application to the mucous membranes (e.g. of the nose or bronchial
                                                                                                                                                                                                                                                                                                                                                    e.g., small cell lung carcinoma or
                                                                                                                                                                                                                                                                                                                                                                   New peptide antagonists of bombesin or gastrin releasing peptide are useful as antimitotic and antisecretory agents in treating,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This peptide is a specifically claimed example of a generic formula. The C-terminal amino acid (Met) of the naturally occurring peptide has been converted to an amide and phe 8 has been replaced by beta-Leu. Gly 6 has also been replaced by D-Ala.

The peptide is useful for treating benign or malignant tissue proliferation, artherosclerosis, gastrointestinal disorders and diabetes. They act as competitive inhibitors of natural peptides, since they bind to the cell receptors but have no biological
                                                                                                                                                                                                                                                                                                              AAR11242 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (TULA )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The analogue may also be of a naturally occurring peptide terminating at the C-terminus with a Met residue, such as 10 amino acid C-terminal region of mammalian GRP or amphilation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 18; Page 54; 58pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAR09335
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC The patent discloses (1) the peptide sequence of bombesin (BBN), CC gastrin releasing peptide (RRP), Neuromedin B or Neuromedin C, CC the peptide sequence having a chlorambucil group attached to the CC amino terminal; (2) a BBN receptor antagonist of formula CC R4-His-TRP-Ala-R1-R2-His-R3-CO-CH2CH3; and (3) a BBN receptor CC antagonist of formula R4-Asn-R5-TRP-Ala-Val-R4-His-Leu-CO-CH2CH3. CC In these formulae, R1 = Val or Thr; R2 = Gly or D-Ala; R3 = Leu or CC Phe; R4 = N-acetyl, bromoacetyl, chloroacetyl, [bis(2-chloroethyl)-CC amino]-L-phenylalanine or a chlorambucil group; and R5 = Gln or His. CC amino]-L-phenylalanine or a chlorambucil group; and R5 = Gln or His. CC growth-promoting effects of BBN/GRP-like peptide antagonists. They CC growth-promoting effects of BBN, GRP or a related peptide such as CC pancreatic cells, gastric cells, neurons, hypothalamic cells and CC cancerous cells or tumours. They can also be used to inhibit the CC binding of BBN, GRP or a related peptide to cells capable of such CC binding. They can be used for treating e.g. peptic ulcer, pancreatitis, CC psoriasis, growth retardation, gastrointestinal motility disorders or tumours. The terminal structures of the compounds protect them from CC in vivo proteolysis and provide highly potent antagonist effects that persist for extended periods of time upon administration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                      The C-terminal residue is amidated. This peptide is one of 27 specific examples of a highly generic formula. The peptides are all analogues of either literin; the 10 amino acid C-terminal region of mammalian GRP, neuromedin B or neuromedin C; or the 10 amino acid C-terminal region of amphibian bombesin. They act as at least partial agonists of the natural peptides. The peptide analogues are made by standard methods of synthesis and can be cyclised.

This peptide is one of 27 specific examples of a highly generic formula. The peptides an analogues of either literin; the 10 amino acid C-terminal revaluammalian GRP, neuromedin B or neuromedin C; or the 10 amino C-terminal region of amphibian bombesin. They act as at least agonists of the natural peptides. The peptide analogues are standard methods of synthesis and can be cyclised. See AAR14860-R14880 and AAR15035-R15040.

                                                                                                                                                                                                     The C-terminal residue is amidated. This peptide is one of 27 specific examples of a highly generic formula. The peptides are all analogues of either litorin; the 10 amino acid C-terminal region of mammalian GRP, neuromedin B or neuromedin C; or the 10 amino acid C-terminal region of amphibian bombesin. They act as at least partial agonists of the natural peptides. The peptide analogues are made by standard methods of synthesis and can be cyclised.
                                                                                                                                                                                 Sequence
